SUMMARY

Designing games is not just my career — it's my life's purpose and greatest passion. From my earliest days studying game programming, where I led my student team to win the **Most Impressive Advanced Diploma Game Project Award**, I've naturally stepped into leadership roles and never looked back. Over the past decade, I've **led design and development** across AAA titles, immersive VR simulations, and narrative-driven experiences played by **millions worldwide**, owning end-to-end **gameplay systems** from **prototype** through **implementation** and tuning.

I thrive at the intersection of creativity and collaboration — from sparking the first idea, to aligning teams on vision, to building systems and features that inspire players. At **EA SPORTS**, I led the single-player **career mode in College Football**, engaging **10M+ players** through progression and balance-focused **gameplay**. At **Monsterful VR**, I guided design and development of training simulations used by **MLB teams**, applying data-informed iteration, scripting/visual scripting workflows, and a reliability-first mindset. And at **Start VR**, I drove Unity development for next-gen frameworks, emphasizing systems design, maintainability, and cross-team collaboration to ensure scalable system setup and robust workflows.

I am both an **autonomous self-starter** and a **team mentor**, known for aligning stakeholders, coaching designers, and championing **player-first experiences**. I bring strong ownership, communication skills, and problem solving to complex RPG and combat design challenges, using design thinking, metrics, and live data to tune moment-to-moment combat and long-term progression while working effectively with engineers to ensure reliability and maintainability.

SKILLS

Core Expertise	: Content Design, System Design, Gameplay Design, Design Leadership, World Building, Cross-Functional Collaboration, Rapid Prototyping
Tools & Tech	: Unity, Unreal Engine, C++, C#, TypeScript, Visual Scripting, Perforce, SourceTree, Jira, Confluence, XML, JSON
Specializations	: Designer Mentoring, Production Leadership, Synthesizing Feedback, Game Design Documentation, Technical Documentation, Tuning and Polish

WORK EXPERIENCE

Senior Technical Game Designer, Refactor Games, Los Angeles, California, United States **Mar 2026 — Present**
(Remote)

- Design ownership of major gameplay features focused on player engagement and retention, applying systems design and balance principles to progression loops and moment-to-moment combat to raise reliability and maintainability.
- Technical planning and implementation within Unreal Engine, using scripting and visual scripting to prototype, tune, and iterate on features with clear documentation, data-driven workflows, and metrics for decision-making.
- Rapid prototyping of new proposed features within a rapidly developing project, collaborating cross-team with engineering and UI to set up systems, improve communication skills, and ensure scalable implementation experience.

Technical Game Designer II, EA Sports Tiburon, Orlando, United States **Sep 2021 — Mar 2026**

- Built and maintained content pipelines, ensuring efficient content integration across disciplines.
- Designed and led implementation and tuning of the single-player career mode (gameplay systems, balance, and progression), from technical design documentation through final combat-adjacent mechanics and reliability testing using data and metrics.
- Trained and mentored designers on the tools and workflows I created, boosting team productivity through clear communication skills, ownership of systems, and problem solving that enabled teams to work effectively across disciplines.

Game Integration Engineer, WB Games, New York, United States **Apr 2020 — Aug 2021**

- Embedded within a AAA game team to support them as they integrate their online services, partnering with engineering on system setup, maintainability, and reliability while documenting implementation notes for cross-team collaboration.
- Building tools for designers and content creators so that they can quickly and efficiently add their craft to the project, enabling data-informed iteration via scripting, visual scripting, and workflows that improve iteration speed and teamwork.
- Facilitating cross-studio communication to help with support and feature requests.

Technical Lead, MonsterfulVR, New York, United States

Apr 2019 — Dec 2019

- Plan and document software architecture documentation for Unity Project.
- Manage small team of developers, assigning work as well as mentoring.
- Design, pitch, and build prototypes of new features for rapid testing and evaluation, applying design thinking and ownership to gameplay implementation while collaborating across teams to validate metrics and improve problem solving.

EDUCATION

Academy of Interactive Entertainment (AIE) , Sydney, Australia - *Advanced Diploma, Computer Game Programming*
Most Impressive Advanced Diploma Game Project Award, "Wholey Moley"

RELEASES

College Football 27, EA Sports, [Link](#) **Present**

- Build on the features released in College Football 25 & 26 to deliver depth and realism to the single player career mode, Road to Glory

College Football 26, EA Sports, [Link](#) **2024 — 2025**

- Lead the production and development of the Flagship High School mode in the single player career mode, Road To Glory

College Football 25, EA Sports, [Link](#) **2021 — 2024**

- Owned multiple complex technical systems to deliver on core pillars of authenticity and depth of College Football

AWARDS & ACHIEVEMENTS

[Sports Game of the Year - Nominee, D.I.C.E](#) **Feb 2025**

EA Sports College Football 25

Game Production of the Year - Winner, Screen Producers Australia Awards **Nov 2018**

Wentworth VR
